

**Curriculum Intent: Geography**

**To develop an understanding of geography that includes society, environment and nature by considering our anthropocentric actions on nature as well as society. Achieved by bringing together an interdisciplinary approach to analysing the challenges faced by humans and the globe.**

<b>Educate</b>	<b>Social</b>	<b>Responsibility</b>	<b>Citizen</b>	<b>Future</b>
The theme of diversity continues during Geography via immigration, Push and Pull Factors and the growth of our population. Students shall also study different continents, their similarities and differences with people from other parts of the world.	The interconnectedness of society will be explored and the impact of development of the planet form the basis of discussion.	Students shall also be taught Human Geography and how population growth can affect our ability to live sustainably. Fair trade, how the relationship between rich and poor MED's and LED's affect the world and the probability of this planet ever being managed in a sustainable fashion.	Students need geography to better understanding of the forces which world was created their planet. Students also need to be aware not just about their locality but be allowed to explore the worlds of their international peers	Similarly the impact of fashion and consumerism on our planet shall be addressed Student shall be given the opportunity to look and the future of our planet, the world in 2050 and suggest ways that shall enable us to achieve a balance with our environment.
